

PRESS INFORMATION

Leonberg, September 30th, 2019

Your time is now.

TECHART launches custom refinement for the new Porsche 911 (992).

All owners of a new generation Porsche 911 are now given a new range of quality refinement and sporty customization. TECHART's new individualization program offers an entire world: exterior styling and aerodynamics, handcrafted interior refinement, intelligent engine power enhancements, emotional exhaust sound upgrades and last but not least an all new forged wheel fitting the 911's mixed 20-inch/21-inch tire configuration.

TECHART introduces new materials and a number of innovations, developing the spirit of the „Timeless Machine“¹ 911 further towards maximum individuality and freedom of choice.

Living in the moment, now and today.

In the development of the new product range, TECHART merged traditional workmanship and new digital design engineering: aerodynamic body parts have been created in both virtual reality and artisan clay modelling. State-of-the-art 3D prototyping has been combined with real-life on track and wind tunnel testing.

New high-tensile materials for exterior parts have been introduced, creating ultra-modern touches – while being virtually invisible.

Natural raw materials and new textures have been processed in TECHART's interior manufactory. The results are hand-made interiors, unique design highlights and an extraordinary look and feel.

TECHART has also created a new forged wheel for the new 911. TECHART Daytona II is the new interpretation of a true TECHART classic, engineered in modern forging technology.

Unifying elements of all TECHART personalization features: the renowned quality level of genuine TECHART products and the unrivaled diversity allowing the customers to customize nearly every detail to their personal preference. Last but not least, peace of mind is a standard feature at TECHART: the TECHART PROTECT warranty covers individualized new and pre-owned Porsche vehicles.

PRESS INFORMATION

TECHART Exterior Design and Aerodynamics for the 911. Made in Germany.

Expressive body parts create the dynamic styling of the new TECHART aerokit. At the same time, every part contributes to well-balanced aerodynamics at the front and at the rear of the 911.

Using the standard mounting points, the installation of TECHART body parts can be done without hassle. A contrasting color concept allows customers to adjust the character of the body styling in order to enhance its elegant or its sporty touch. The TECHART aerodynamic bodykit and wheels are entirely manufactured in Germany, ensuring highest product quality.

The parts of the new TECHART Aerokit for the 911.

The new five-piece TECHART Front Spoiler I includes a splitter element which seems to float freely inside the surrounding spoiler shape. As a result, the front apron covers close to the road surface. Design trims on both sides of the spoiler as well as the two-tone paintwork add an elegant and sporty touch. The TECHART Front Spoiler I does also fit 911 models equipped with Porsche's SportDesign package. The spoiler can be installed without removing the 911's front apron.

Two-piece TECHART Airframes highlight the two air intakes at the front of the 911 and enhance its powerful appearance. Here too, the choice of the paintwork offers additional personalization opportunities, including a color-matching of standard body parts such as the active air intake louvers. New design feature of the TECHART bodykit: side air outlet trims in front of the wheel arches on both sides of the front fascia.

PRESS INFORMATION

Athletic TECHART Side Skirts transfer the design line to the side view. Instantly visible: this 911 is not a standard one. The multi-piece design divides the side skirts into an inner side skirt profile which integrates seamlessly with the body and a second outer side skirt which creates a distinct contrast. This virtually lowers the vehicle's balance point. The side skirts end with a characteristic shark-like fin in front of the rear wheel arches.

The lower rear is dominated by the new TECHART Rear Diffusor, which spreads to both sides of the rear apron. Five diffusor fins help to reduce the aerodynamic lift and can be individually color-matched.

TECHART Aero Wings in body color are located above the diffusor and add a finishing touch to the 911's rear. The trims surround the 911's exhaust tips on both sides and add emphasis to the rear air outlets.

A profiled TECHART Roof Spoiler guides the airstream to the fixed TECHART Rear Spoiler II. The newly shaped wing profile leaves no doubt: creating additional downforce is its very aim. However, the sophisticated design strikes the eye as the TECHART wing seems to be fixed on just one central upright. This ultra-modern styling is created by the use of glass-like spoiler uprights made of Makrolon®. The transparent and high-tensile polycarbonate allows the rear wing to rest like a sculpture on the engine cover. This cover has also been redesigned for the new TECHART Rear Spoiler II. It incorporates two air intakes as well as an additional braking light.

For 911 owners who prefer a rather subtle spoiler element at their 911's rear, the TECHART Rear Spoiler I is an alternative. The aerodynamic add-on is mounted to the standard rear spoiler. With the TECHART Rear Spoiler I, the automatic adjustment of the active spoiler remains unchanged.

PRESS INFORMATION

TECHART engine power enhancement and emotional sound for the 911.

A new TECHART powerkit provides increased individual driving pleasure at any time. Available for the new 911 Carrera 4S, the TECHART TECHTRONIC based power upgrade provides additional 60 horsepower (44 kW) which results in an overall power output of 510 horsepower (375 kW). The maximum torque is increased by 80 Newtonmeters to 610 Newtonmeters.

One of the core values of TECHART powerkits is the intelligent integration into the vehicle's electronic management. The power add-on is activated in the 911's driving modes Sport and Sport Plus.

Therefore, a switch of the standard driving mode button is everything it takes to enter a new level of driving performance. Good to know: the TECHART powerkit considers the 911's assistance systems, such as the innovative Porsche 'WET' mode. The TECHART powerkit reduces the power gain automatically according to the water detection of the system.

The new TECHART sports exhaust system completes the emotional individual driving experience. Dynamic exhaust valves create an impressive soundscape which is also adjusted in accordance to the selected driving mode. This allows the driver to easily switch from standard power and sound to increased performance combined with sporty driving sound whenever she or he is in the mood.

The TECHART sports exhaust system fits the exhaust tips of the Porsche sports exhaust system. Within short time, additional sports exhaust options as well as TECHART sports tailpipes will be available for the new 911 models.

PRESS INFORMATION

The new TECHART Daytona II forged wheel for the 911.

As part of the new individualization range, TECHART presents an all new forged wheel for the 911. The sophisticated design reinterprets a classic TECHART wheel design of the past. At the time of the 996 models, TECHART's Daytona wheel has been an accessory sought-after. Today, genuine TECHART Daytona rims have become a collector's item.

The new TECHART Daytona II is an evolution of this design, engineered for the new 911 in modern forging technology.

TECHART Daytona II forged wheels are available in 20-inch and 21-inch fitting the mixed tire configuration of the new 911 models. Like every TECHART wheel, it can be configured individually in one- or two-tone color. The new wheel fits flush with the wheel arches creating a sporty appearance. Spacers for a wider track are not required.

An optional TECHART sport suspension lowers the chassis of the 911 by 30 mm.

TECHART Interior Refinement: customized highlights for the 911 in leather and virgin wool.

Supple leather and, as a new material, genuine new wool, also known as virgin wool. The interior manufactory at TECHART creates individual refinement highlights according to the customers' preferences. The elegant combination of leather and wool was introduced by TECHART in 2018 for the new Porsche Cayenne. Now, it enriches the wide range of TECHART options for the 911 interior.

Illuminated carbon door sill plates, sporty aluminium pedals, handcrafted TECHART sports steering wheels and much more is at the customers' choice to turn their 911 into an individual piece of art.
